Projects

Crypto-Currency

Oct-2023

Live crypto curruncy data

🔗 <https://jyotipatthak.github.io/crypto-dashboard/>

Developed a Cryptocurrency Market Analysis web tool with React and Redux, featuring interactive charts, currency comparison, and conversion tools. Tackled challenges in real-time data integration, responsive design, performance optimization, and secure data handling, providing a robust and user-friendly platform for cryptocurrency enthusiasts, investors, and traders.

Flipkart

15 june 2024

A shopping website

🔗 <https://flipkart-main1.vercel.app/>

Developed a full-stack Flipkart clone using React for the frontend and Node.js with MongoDB for the backend. Implemented features including user authentication, product browsing, and a shopping cart. Ensured a responsive design, optimized performance, and secure data handling to deliver a seamless e-commerce experience.

BookMyShow

28th Oct 2023

It is a movie ticket booking website

🔗 <https://jbookmyshow.netlify.app>

The project "BookMyShow" is a remarkable and innovative ticketing platform that has been developed using a stack of cutting-edge technologies, including Node.js, Express, Mongoose, MongoDB, and React.js. This combination of server-side and client-side technologies has enabled the creation of a powerful and feature-rich system for booking and managing tickets for various events, from movies to concerts and sporting events.
